

**EJOT**<sup>®</sup>

**EJObar**

## Low cost, membrane-friendly bridging for flat roofs

**EJObar** is a new, multi-purpose bridging bar that creates a fixing base for a wide range of applied systems - typically mechanical & electrical essentials through to certain solar thermal and PV systems. In fact, EJObars are perfect for almost anything that needs to be secured onto or over the single ply membrane system.

**EJObar** is supplied in a range of practical lengths and consists of a PVC profile, casing a strong aluminium insert - sealed tight by two endcaps. EJOT's super-clean JF3 self-drilling fasteners complete this totally unique and user-friendly package!

**EJOT's super-clean, super-fast JF3 self drilling fastener makes EJObars even easier to use**

# EJOT® EJObar

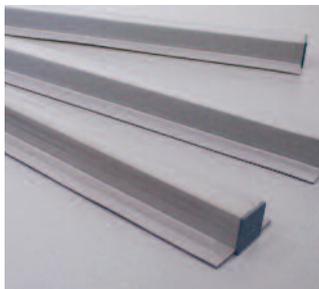

## Incredibly versatile and VERY cost-effective!

- Clean, professional solution - no penetration of the roofing membrane is required
- Practical, adaptable and low in cost
- Ideal for most single-ply membranes
- Creates a strong, watertight fix
- Easy to weld or can be used free-standing
- Ideal for carrying mechanical & electrical equipment, walkway systems, applied cladding systems - and many solar applications

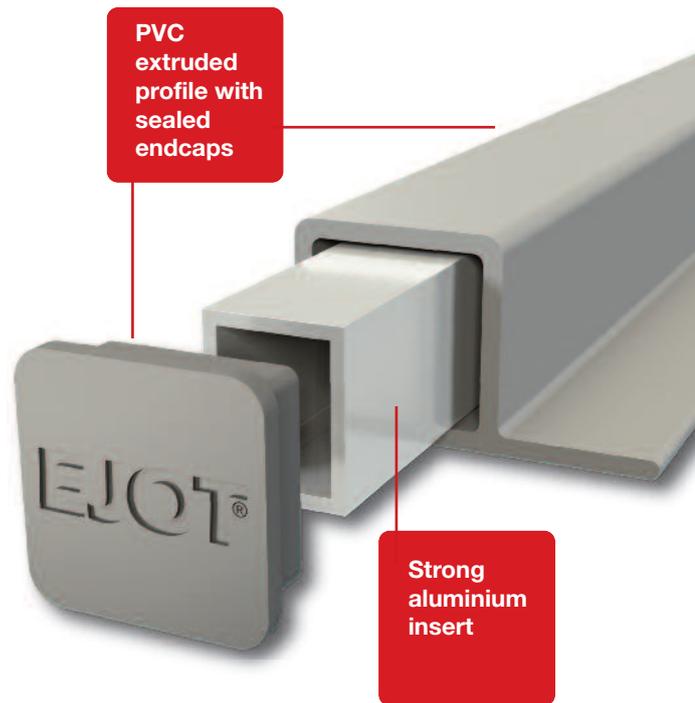

### Fix EJObar to the roof, or use free-standing

EJObar can be easily hot welded to make a very strong fix

EJObar can even be used free standing for many applications

**EJOT EJObar** is the perfect low-cost solution to a multitude of single-ply membrane applications, for flat roofing and M & E contractors alike.

Our sales engineers are available to provide any technical information you may require.
