

Whispower™ Blades in glass reinforced incredibly quiet strong and UV resistant

High power rare-earth neodymium magnets means more power less weight

A4 Stainless Fixings with Nylon Inserts to eliminate electrolytic corrosion

Enamel and epoxy coated cooper stator protected against the elements, yet open to cooling for improved efficiency

Dual sealed for life top quality SKF for roter and yaw pivot.

On board Rectifier for DC output

Anodized Aluminium and stainless steel components throughout

Double fixing points: mounts to a scaffold pole 48.3mm or 50mm

Sleek lightweight but strong aluminium chassis making the turbine weight just 6kg total

High quality marine grade surface finish protected against corrosion

Counterweighted means the turbine catches the wind whatever the angle of the mast
