

# LE-300

## Marinised

Anodized aluminium and stainless steel components throughout.

## Total Protection

Enamel and epoxy coated copper stator protected against the elements, yet open to cooling for improved efficiency.

## High power

Rare-earth neodymium magnets means more power, less weight.

## Efficient and Low Noise Level

Whisper™ Blades in glass reinforced nylon.

## Mounting

Double fixing points. Mounts to a scaffold pole 48.3mm or 50mm

## Durability

Pairs of top quality SKF bearings for both rotor assembly and yaw pivot.

## Lightweight

Aluminium chassis making the turbine weigh just 6kg in total.

## Stability

Counterweighted which means the turbine catches the wind whatever the angle of the mast

## High Quality Finishing

Marine grade surface finish protected against corrosion.

## Compact

On board rectifier for DC output.
