

LE-V50

Reliability

Dual pivot rotor assembly supported with top quality SKF bearings.

Effectively Designed

LE-v50 utilises a cross-ventilated savonius vertical axis rotor coupled with well proven axial flux alternator design.

Quiet Operation

The Turbine can be installed in noise sensitive environments

Marinised

Anodized aluminium and stainless steel components throughout.

Lightweight

Using lightweight durable aluminium the LE-V50 weighs 9kg making it easy to installed

Cross Flow Ventilated Rotor

Higher output then other vertical axis turbines

Compact and Contained

The LE-v50 has the ability to self regulate without the need for external charge controllers
