

Sponsored Charge Point.

Sponsored Charge Point lets an employer connect to an employee's home-charger, to automatically reimburse the employee for charging a company vehicle at home. This feature is designed for companies with fleet vehicles that are brought home by employees.

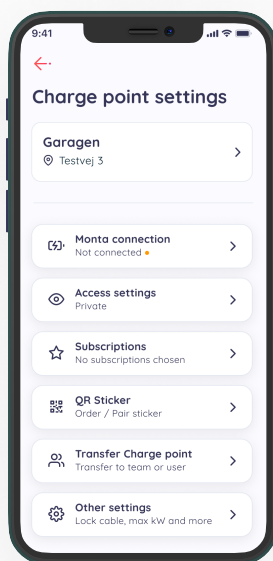

The Sponsored Charge Point feature helps solve:

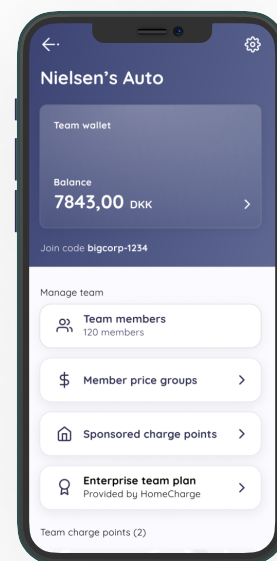

- The administration in needing to reimburse the employee manually
- The need to note which vehicle is charging, and when. You simply select the company vehicle, when initiating a charge.

With this feature, combined with **Pay with Team Wallet**, a company will only have a single monthly item for the bookkeeping for the company vehicle's charging at home, on the company's chargers, and on the road.

Setting up a Sponsored Charge point is a simple 2-step process, and can easily be done by the employee and the company administrator.

Generate and send code
In the charge point's settings under **transfer**, you will find the code.

Enter code and add reimbursement
Add the code within the Portal, or App, and select how much the employee should be reimbursed per kWh
