

Heat Pump? Meet Homely

What is Homely?

Homely's clever controller makes your heat pump work smarter, not harder. It learns your home, your habits and your tariff - making comfort automatic and saving you money along the way.

How it works:

Homely learns your home.

Every house is different - so Homely works out how yours warms up and cools down, building a plan tailored just for you.

It keeps you comfortable automatically.

Set your preferred temperature and Homely quietly handles the rest. No fiddling, no faff.

It looks at your tariff and weather.

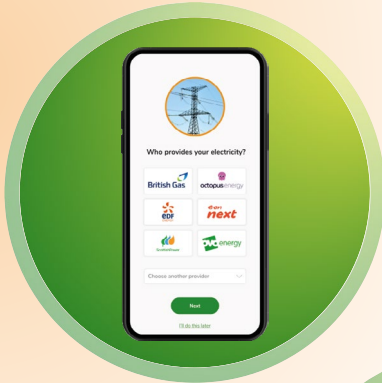

With a time-of-use tariff, Homely's Smart+ mode shifts heat pump use to the cheapest times. It even checks the weather forecast because... well, someone has to.

It reduces your running costs.

By managing when and how your heat pump runs, Homely helps lower energy bills without you lifting a finger.

Lower Energy Bills

Homely's smart scheduling helps you save on your heat pump bills and make the most of your tariff. That's a win-win for you and your wallet.

Reduced Carbon Footprint

You can save 2 tonnes of carbon per year – that's the same as driving 9,000 miles!

Effortless Comfort

Tell Homely the temperature you like, and that's it. No thermostat tapping, no guesswork. Just smooth, consistent warmth.

Remote Monitoring & Servicing

Your installer can check your system remotely, helping to diagnose issues faster and reduce unnecessary callouts. Peace of mind built in.

Homely works quietly in the background, coordinating your heat pump, your energy tariff and your home's heat profile to keep you comfortable for less. Whatever the weather throws at you, Homely's got you covered — and your bills under control.
