**Application pack:
Graduate Scheme 2026**

Dear Applicant,

Many thanks for your interest in our graduate scheme! Please find enclosed a description of the role along with some further information about what makes us tick. To apply for the role, please complete the online application form at midsummerwholesale.co.uk/jobs.

You will need a CV and cover letter in PDF format too. We will be in touch as soon as possible with regards to your application - please bear with us though as it tends to get busy when the sun comes out! We really look forward to hearing from you.

yours faithfully,

Andy Rankin
Managing Director, Midsummer

The role

Do you want to work in sustainability but don't know where to start?

Do you want to get experience in all the key areas of a business in the renewables industry?

Midsummer offers a unique graduate scheme, that sees our grads get stuck in to all aspects of a busy and growing renewables distributor.

Who we're looking for

- You're intelligent, friendly, good with technical detail, and you want a career that will make a difference. Perhaps you're inclined to start your own business one day - at any rate disappearing into a large organisation or doing the same thing every day doesn't appeal.
- You're eager for early responsibility and you want to find out first-hand how a growing business operates in a young and competitive industry.
- You're ambitious, passionate about the environment and about business.
- You're well-rounded in your skill-set - you've a head for figures, great communication skills and you're willing to get stuck in.

Don't meet all these requirements? Don't worry, you might still be the right person for the job. If you have enthusiasm and potential we want to hear from you!

The Programme

The purpose of the graduate scheme is to give you wide ranging experience of all aspects of operating a small company. You will spend time in various departments of the business, possibly some of the following:

Solar Sales Team

Working with the Sales and Administrative teams, you will deal direct with customer enquires and orders. As well as speaking to customers on the phone, or answering their emails, you will be processing online orders and helping with customer payments and stock or design queries. You will also liaise with the operations team while handling customer enquiries about deliveries and logistics, and spend some time in one of our warehouses.

Renewable Heat Team

We launched our renewable heat division in 2021, so it's still the newest part of Midsummer, and one with enormous growth potential as the UK begins to decarbonise its heating. A rotation in the heat team offers the opportunity to learn the technical ins and outs of heat pumps, and the associated system parts, as well as the considerations that go into a proper system design for retrofit and new build applications. You'll handle customer enquiries, get hands-on with the hardware, and take part in developing, using and promoting our unique heat pump sizing software, [Heatpunk](#).

Marketing and Communications

Any successful company needs a great marketing team and ours is the best. You may be plunged straight into the planning and logistics of setting up our stand for a trade show, or get creative and help to design materials for a new product launch, or refresh those literary skills by writing an article for our [blog](#).

The Programme (cont'd)

Software Sales

As part of the Software Sales team, you'll play a key role in promoting and supporting customers to use and get the most out of our innovative software tools, [Easy PV](#) and [Heatpunk](#). You may also provide technical support and guidance to users, resolve any issues they encounter, and ensure that their experience with our software is smooth and efficient.

As well as the above, the scheme will expose you to business functions that may include the following:

- Purchasing
- Operations & Logistics
- Off Grid Systems
- Administration & Accounting
- Technical Support

There may be the opportunity to spend a month or two at our Glasgow offices during the year!

As a hands-on introduction to all aspects of running a medium sized company, our graduate scheme will equip you with skills and experience that would transfer to any small but growing firm, and an insight into a career in the renewables industry.

What we offer

You'll gain hands-on experience in the sort of day to day decision-making that happens at a growing company in a rapidly-changing industry. You'll enjoy exposure to real business problem-solving in a variety of contexts, and put your talents to use in a dynamic team environment.

The programme offers a salary of £30,000 and the possibility of a long-term position for the right candidate, as well as the chance to develop contacts in a growing industry. There's a friendly and informal atmosphere in the office, and a real buzz when things get busy.

Benefits include:

- Free bag of delicious, fresh, locally-grown organic veg every week
- Pension salary sacrifice scheme
- Employee Assistance Package
- EV salary sacrifice scheme
- Cycle to work scheme
- Free bike maintenance
- Early finish on a Friday
- Lots of clubs to get involved with and company socials
- On-site parking

We are flexible on start dates, but generally expect those on the graduate scheme to join us some time over the summer. You do not need to be fresh from the graduation ceremony but this is a career development opportunity in the renewable sector!

To apply

Please complete the online application form at <https://midsummerwholesale.co.uk/jobs>

Our Story

2005

2015

2026

Midsummer began life in the front room of a narrowboat, when our founder started selling solar panels to fellow boaters.

Sticking to our roots

We've grown through 7 ever-larger warehouses since then and diversified what we do - but an important part of our business remains the supply of off-grid systems to customers who need power away from the national grid.

Growing branches

With the introduction of the Feed-in Tariff in 2010 we began installing and supplying larger grid-connect solar PV systems. Today, the distribution of solar PV and battery storage accounts for the majority of our £125M annual turnover.

Planting seeds

In 2019 we opened a subsidiary on the outskirts of Dublin. Our team have gone from strength to strength, and have just moved to a larger warehouse. Last year we also opened another satellite warehouse in Glasgow.

Software - the secret of our success

We've written our own PV design software that makes designing solar power systems incredibly easy. It's used by installers and manufacturers in the UK and internationally.

We have also developed software for designing heat pump systems. Heat pumps are the future of heating, and we want to be at the forefront of their deployment in the UK. They will be an important part of the next chapter of our story!

Our values

It has never been our aim simply to make a profit. We want to make a positive impact on the world around us too. This is what we stand for.

Eliminating fossil fuels

We are passionate about moving as swiftly as we can to eliminate fossil fuels from electricity generation, heating and transport. We only sell products and systems that further that aim.

We are also working to reduce fossil fuel use in our own operations. We have solar arrays on our Milton office and our warehouse in Glasgow. We help our employees to keep their own footprints low by encouraging cycling and walking over car use.

Reducing consumption

Over-consumption is at the heart of many of the environmental problems that the world is experiencing. Most businesses operate a business model which is designed to encourage consumption. We want to be different.

We sell solar PV systems that greatly reduce the amount of energy that properties need to import, and we sell heat pumps that use less primary energy (and from less damaging sources) than the fossil fuel based heating systems that they are replacing.

We don't sell disposable items. All the products that we sell are designed to last for many years. Many of the solar panels we sell have a 30 year warranty.

We try where we can to reduce consumption in our own operations. We re-use a lot of the packaging that products arrive in.

Putting people and planet before profit

We believe that businesses have a bigger responsibility to the planet, and to their employees and the communities they operate in, than they do to their shareholders.

We are a successful business. Some of our annual profit is returned to our employees through a staff profit share scheme. We also have a community fund which donates to socially beneficial and sustainable projects in the community. Almost all the remaining profit is reinvested into the business - very little is paid out in shareholder dividends.

We believe in reducing the gap between rich and poor. We pay well over the living wage to all our employees, and our profit share scheme is equitable, so that all employees, from the most junior to the most senior, share equally in the rewards when the company does well. For senior staff we aim to pay competitive salaries, but we don't believe in excessive executive pay.

We believe healthy employees are happy employees. We work with local organic growers to provide all our employees with a vegetable box each week.

Leadership team

Andy Rankin

Founder

A former climate scientist who started a solar company from his off-grid home 15 years ago. Andy likes to build things from scratch, whether that's companies, houses, solar farms, software or freight bikes.

Jamie Vaux

Commercial Director

An environmental business enthusiast who went looking for a company to throw his idealism at, Jamie has spent 10 years chasing sales and building the Midsummer team. Out of the office you'll find him lifting something heavy or cooking.

Lowri Goodyer

Sales Director

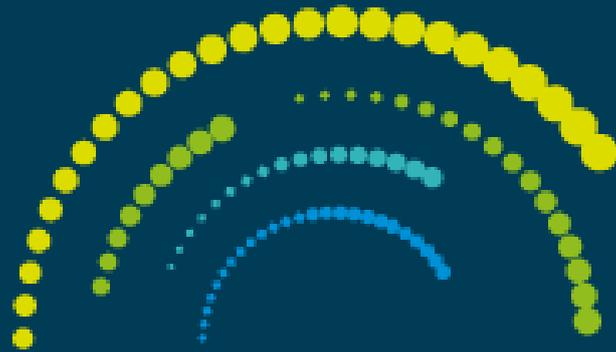

A fellow eco-crusader, Lowri heads up UK sales - and can be found climbing, surfing, running, snowboarding or gardening when she wants a rest!

Tom Kemsley

Scotland Manager

Tom joined our graduate scheme green out of university. Although he subsequently tried to escape, even in New Zealand he found the magnetic pull of Midsummer drawing him back. He heads up our office in Glasgow.

MIDSUMMER

2022 Distributor of the Year - Solar & Storage Live Awards
2024 Cambridgeshire's Top 100 Companies (7th) - Grant Thornton
2024 Cambridgeshire's 50 Fastest Growing Businesses (2nd) - Grant Thornton
2025 FT Europe's Fastest 1000 Growing Companies - Financial Times

"I can't imagine a job I'd love more or a company I could be more committed to. Every single day we're moving renewables forward and I'm surrounded by a great bunch of people helping to do it."

Jamie Vaux, Commercial Director

Easy PV

Solar design made simple

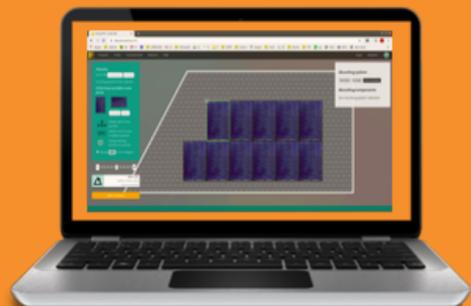

We used to install solar PV systems ourselves - and found that we had to use 5 or 6 different software packages to complete a full design.

Every mounting system, every inverter brand, had their own design tool - and then you had to use spreadsheets and word processors to pull everything together and create a nicely formatted quote.

We shoehorned a design package together that did everything - and saved ourselves a lot of time and wasted effort!

When we gave up installations to concentrate on distribution, we realised our design tool was actually one of our greatest assets. We put a huge amount of effort into improving it and making it available to our distribution partners. It's now used by hundreds of people every day to design PV systems. And because it connects seamlessly to our e-commerce website, it makes it easy for users to purchase from us. We have seen our sales grow enormously as a result.

- Draws roofs to scale
- Automatically create solar array layouts
- Designs the mounting system and undertakes structural calculations
- Selects appropriate inverters and undertakes stringing calculations
- Specifies electrical components
- Creates a schematic
- Produces shading & yield calculations
- Generates a professional quote and technical report
- Makes financial projections for the customer
- Auto-completes commissioning forms
- Connects to our websites for rapid ordering

33,000+

designs a month
(and growing rapidly)

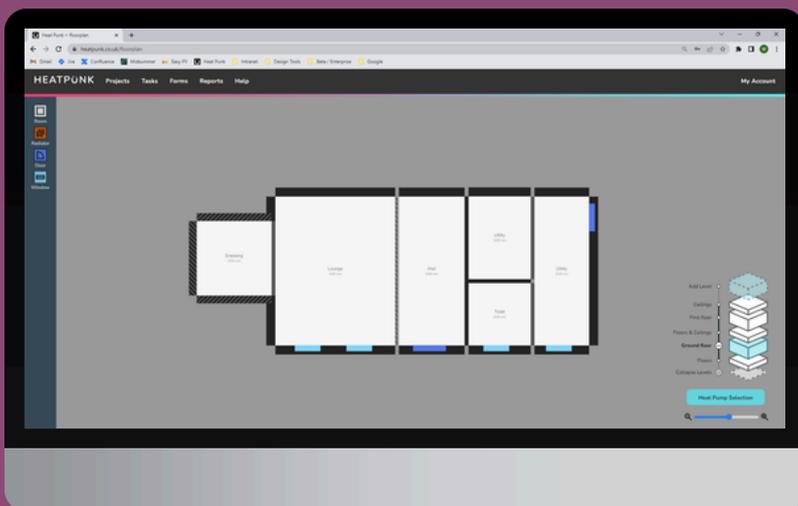

easy-pv.co.uk

HEATPÜNK

We've also released a tool that allows installers to survey properties and design heat pump systems.

Building on the web technology we used to create the roof editor for Easy-PV, we've created a floorplan editor that makes it extremely easy to draw a house to scale and undertake detailed room-by-room heat loss calculations.

The software automatically selects the optimum heat pump and shows which rooms may need upgraded radiators to work at the relatively low flow temperatures that a heat pump produces.

Heat pumps are the future of heating, We're at the beginning of a transformation of the entire heating industry, and our software will be a big part of that. There are exciting times ahead!
