

Modular

X-Anchor

Installation: Steel rods driven in with hand tools

Materials: Hot rolled steel (S355JR). Hot dipped galvanised to ISO 1461

Dimensions: 600mm embedment

Type of Mounting

This is a patented foundation solution designed to facilitate the installation of small and large scale ground mount with the use of hand tools. Steel rods are driven in with hand tools at an angle to ground the mounting system.

Application and Benefits

A versatile foundation type, that does not require large machinery to install.

Due to the low penetration, the X-Anchor can also be used on made-ground such as former landfill sites for example. In addition, because no machinery or ballast is required the X-Anchor can be installed on slopes up to 45 degrees.
